Team Member Roll Number		2520030406
Team Member Name		Praveen Busala

1. Abstract

The Land Records & Pahani Portal is a web-based application designed to simplify access to land-related information and services. Traditionally, retrieving land records such as Pahani/RoR, applying for mutation, and tracking encumbrance certificates involves manual processes that are time-consuming and inefficient. This project aims to digitize these services into a centralized platform.

The system allows users to search land details using survey numbers, view ownership and land information, and download records in a digital format. It also enables users to submit mutation and encumbrance certificate (EC) applications and track their status in real time. An admin panel is provided to manage applications, verify requests, and update statuses.

The frontend is developed using React.js to provide a responsive and user-friendly interface, while the backend uses Node.js and Express.js to handle data processing and API integration. The system ensures transparency, reduces manual workload, and improves accessibility for citizens.

2. Module Mapping

Module Name	Assigned Roll Number(s)	Signature
User Authentication (Login/Register) Survey Search & Land Details EC Application Module Admin Panel Database Management	2520030021	
Mutation Request Module Status Tracking System PDF Download Module Notification System UI/UX Design	2520030406	

3. Module Details

Authentication: Handles login and registration of users securely.

- **Survey Search & Land Details:** Allows users to search land records using survey numbers and view ownership, area, and location details.
- **Mutation Request Module:** Enables users to apply for ownership changes in land records.
- **EC Application Module:** Allows users to apply for encumbrance certificates online.

- **Status Tracking System:** Displays the current status of submitted applications (Pending, Approved, Rejected).
- **PDF Download Module:** Provides downloadable digital copies of land records.
- **Notification System:** Alerts users about application updates and status changes.
- **Admin Panel:** Allows admin to verify, approve, or reject applications and manage records.
- **Database Management:** Stores user data, land records, and application details.
- **UI/UX Design:** Ensures a clean, responsive, and user-friendly interface.

4. Frameworks / Platforms / Software Used

HTML5, CSS, JavaScript (ES6+), React.js, Node.js, npm, Postman (API Testing), MySQL(optional), REST APIs, Express.js, Axios, React Router, Context API / Redux, LocalStorage, Bootstrap / Tailwind CSS
